## CORRECTION FACTORS FOR TARGET OF

Steel FE 360	1	Copper	0.8	Aluminum	1	Brass	1.3	Stainless Steel V2A 1/2 mm	0.4 / 0.6
--------------	---	--------	-----	----------	---	-------	-----	----------------------------	-----------

## CORRECTION FACTORS FOR EMBEDDABLE MOUNTING IN SUPPORT OF

Steel FE 360	0.9	Aluminum	0.8	Brass	0.8	Stainless Steel V2A	0.9
--------------	-----	----------	-----	-------	-----	---------------------	-----

Note: the operating distance of the sensor must be multiplied by the correction factor of the material. For example, the operating distance on Aluminum is  $S_{n,Al} = S_n \times CF_{Al}$ . In case of embeddable mounting, the distance is multiplied by the additional correction factor of the support, thus  $S_{n,Al} = S_n \times CF_{Al} \times CF_{emb,Al}$ .
