

HIGH QUALITY IMAGING OPTICS FOR ANY APPLICATION

 **NAVITAR®**

Looking to the Future

Navitar enters into this new decade with excitement! We couldn't help but be inspired by the year 2020. It made us think about perfect vision and the need for imaging solutions that go beyond what is available to our customers today.

Our mission for the year 2020 is to take vision technology further than ever before. We will deliver advanced imaging solutions to customers allowing them to build innovative systems and achieve revolutionary results.

Throughout the coming year, Navitar is introducing new products and technologies with higher resolution, greater fields of view, faster and more repeatable zoom capability, and greater quantum efficiencies.

Look for new 10 GigE camera systems, Optotune lenses for our high magnification imaging systems, new macro lenses, factory automation lenses, camera modules, and more.

34 Precise Eye Lens System

40 NUV-VIS Zoom System

42 Dual View Lens System

44 MTL System / HR Objectives

47 Autonomous & HDR Lenses

48 Illumination

50 Large Format Lenses

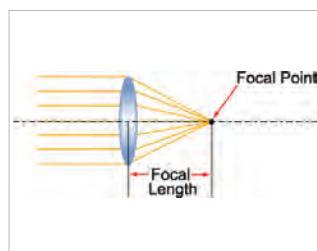

52 FA Lenses

63 Projection Lenses

64 Pixelink Cameras

66 Quick Reference

Lenses & Assemblies

Navitar produces high performance, high quality imaging and projection lenses used in a variety of applications. We offer standard off-the-shelf products as well as custom designs and deliver thousands of custom lens assemblies per year.

Whether you are looking for a high magnification zoom lens system with motorization, a wide angle fisheye projection lens, or HDR lenses for autonomous vehicles, Navitar can help with your project.

Our Capabilities:

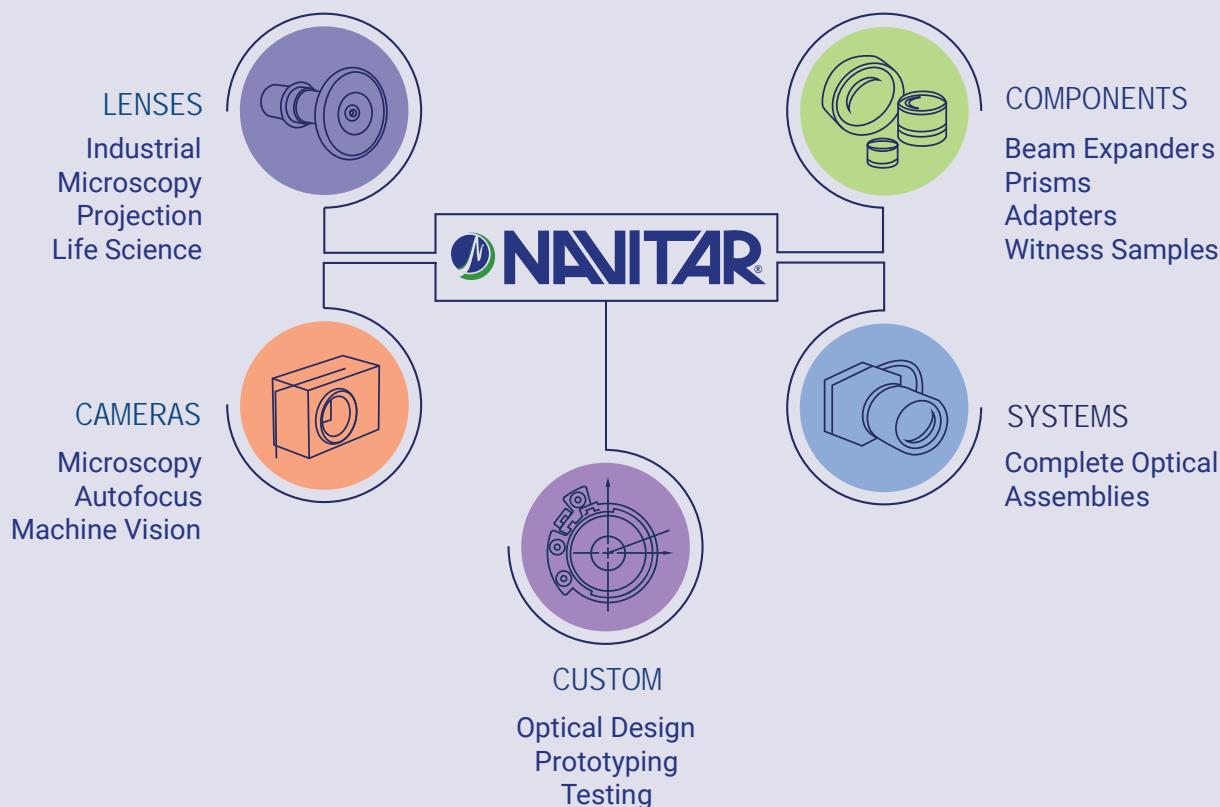

- Optical, Mechanical and Electro-Optical Design
- Custom Engineering
- Low to High Volume Production
- In-House Manufacturing
- Lens-Sensor Alignment
- OEM Lens Assemblies

Navitar has designed and produced world-class projection lenses since 1978. We offer a wide range of replacement, conversion, fisheye, and custom projection lenses for projectors up to 4K resolution.

Our projection lenses are ideal for corporate and education facilities, planetariums, museums, simulation, immersive environments, and amusement attractions.

Experts in Projection Lens Design:

- Relay and Non-Relay Designs
- Rectilinear and Fisheye Designs
- Fisheye Lenses and F-theta Distortion
- Uniform Pixel Mapping at Image Edge
- Unique Chip Sets, Color Off-Sets
- Panel Size Variations in Light Engines
- Customer Masking Requirements
- Tolerance and Sensitivity Analyses

Cameras

Navitar offers fully integrated end-to-end lens and camera imaging solutions to customers worldwide.

Based in Ottawa, Ontario, Canada, Pixelink manufactures, optimizes and integrates industrial cameras for machine vision applications and microscope cameras for life science and digital microscopy applications.

Camera Types:

- USB 3.0
- Board Level
- Autofocus
- USB 2.0
- Enclosed
- HDR
- FireWire
- Trigger
- Polarized
- GigE

Features:

- USB3 Vision Compliant
- High Resolution
- Low Noise Images
- Fast Frame Rates
- One Push Autofocus
- Software Development Kit
- Remote Trigger

Applications:

- Machine Vision
- Medical Imaging
- Biometrics
- Microscopy
- Virtual Reality
- Inspection
- Metrology
- Strength Testing
- Biotechnology
- 3D Object Recognition

Custom Optics

Special Optics designs and manufactures custom microscope objectives for OEMs and researchers who require a solution that is not available off-the-shelf.

Designs span working distances of 0.3mm to 55mm, cover wavelengths from VIS-NIR, can be modified for aqueous, oil and vacuum environments with stainless, ultem or titanium housings.

Custom Objective Application Examples:

- Multi-photon Microscopy
- Cold Fermion/Atom Trapping
- Confocal Microscopy
- STED Microscopy
- Deep Tissues Imaging
- Microscopy and Analysis of Quantum Structures
- Super Resolution Microscopy
- Failure Analysis of Structural Materials
- Live Cell Fluorescent Microscopy
- diSpim Cleared Tissue Imaging

Lens Manufacturing Tolerances:

| Attribute | Commercial Quality | Precision Quality | High Precision Quality |
|-----------------------------|--------------------|-------------------|------------------------|
| Diameter (mm) | +0.00/-0.10 | +0.000/-0.05 | +0.000/-0.025 |
| Center Thickness (mm) | 0.150 | 0.050 | 0.005 |
| Radius (power) | 8 rings | 4 rings | 1 ring |
| Irregularity (waves @633nm) | 1 | 0.25 | 0.1 |
| Wedge (mm) | 0.05 | 0.005 | 0.0025 |
| Decenter (arc min) | 0.05 | 0.01 | 0.005 |
| Scratch-Dig | 80-50 | 60-40 | 10-5 |
| AR Coating (r avg) | < 1.5% | < 0.5% | < 0.25% |

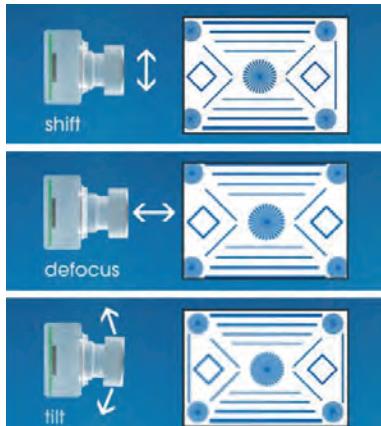

Sensor Integration - Active Alignment

Active alignment of a lens and sensor enables accurate, cost-effective production of high resolution, precision camera modules. The alignment process ensures the full capability of the lens and sensor are carried over to the completed module.

Smaller pixels and larger sensors are driving the need for fast, high resolution lenses. Meeting these high quality demands, yet maintaining a manufacturable lens at a reasonable cost, has forced engineers to employ a variety of techniques to deal with tolerance concerns during lens design. Many times, these manufacturing techniques result in positional accuracies in the single-digit μm range.

Often times, manually attaching a high quality lens to a high quality camera results in a poor to mediocre image due to standard, mechanical attachments such as c-mount or f-mount. The tolerances used for the manufacture of standard mounts, though acceptable for standard imaging, are far too lenient for high resolution applications.

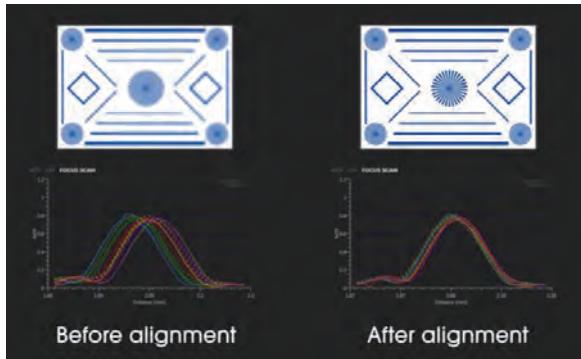

Effects of Misalignment. Image courtesy of Trioptics.

Benefits of Active Sensor Alignment

This is where active alignment comes into the picture. The lens and sensor are aligned while projecting multiple targets through the lens and onto the sensor while the sensor is imaging. The active alignment machine continually monitors the MTF at each of the target images until all MTF values are within acceptable limits.

When all MTF values are acceptable, preapplied adhesive is partially cured using UV, with complete thermal cure performed later. This allows the sensor to be aligned, within micrometers, to the appropriate lens image plane.

MTF Before and After Alignment. Image courtesy of Trioptics.

Precision Camera Module Production

Navitar 4K HDR lenses offer simple operation, little-to-no focus loss over large temperature ranges, outstanding color correction, and low lens-to-lens variation.

Combining HDR lenses with Pixelink camera sensors allows simple image acquisition (via USB 3.0, GigE, Firewire, etc.) and flexible image processing options to suit your individual application.

Choose from off-the-shelf Navitar 4K HDR lenses and Pixelink camera boards from 2/3" up to 1.1" sensor formats or tailor one of our existing designs to fit your specifications with no time lost during the design process.

Navitar camera modules are used in the automotive, virtual reality, augmented reality, drone, surveillance and agricultural industries.

Active Alignment Position Accuracy Achieved

Specification

| | |
|--|---------------------|
| Alignment Degrees of Freedom (DOF) of Sensor | 6 |
| Alignment DOF Resolution | < 0.1 μm |
| Pitch and Roll Accuracy | < 2 arcmin |
| Yaw Accuracy | < 360 arcsec |
| Mechanical Lens to Sensor Centration | < 2 μm |
| Number of Modules Per Hour (MPH) | 120 MPH |

Next Generation Zoom Technology

The Resolv4K Lens Series was designed from first order principles to maximize the usage of sensors with higher pixel densities. Numerous adapter options allow users to employ a range of sensors from 1/2" through APS formats and beyond. On the front end of the zoom lens attachments give users the best of both worlds; the low mag end of zoom gives wide fields of view with no sacrifice in MTF or loss of illumination, while the high mag end delivers microscope objective like resolution at extremely long working distances.

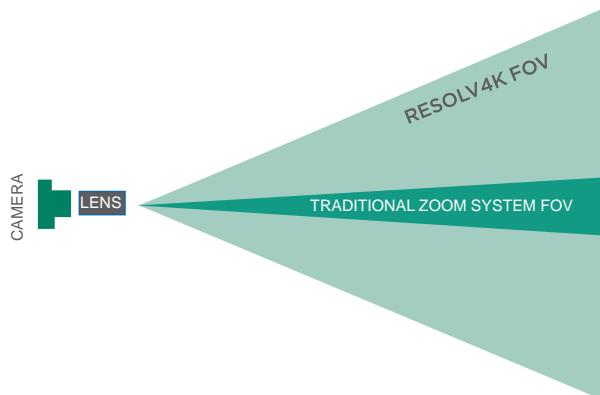

The Resolv4K lens has been designed not only for superior visible wavelength axial color correction, but dramatically increased wavelength focusing ability with Visible through Near Infrared (Vis-NIR) and SWIR options. Larger aperture lens attachments significantly increase the usable FOV for coaxial lighting options.

More Throughput

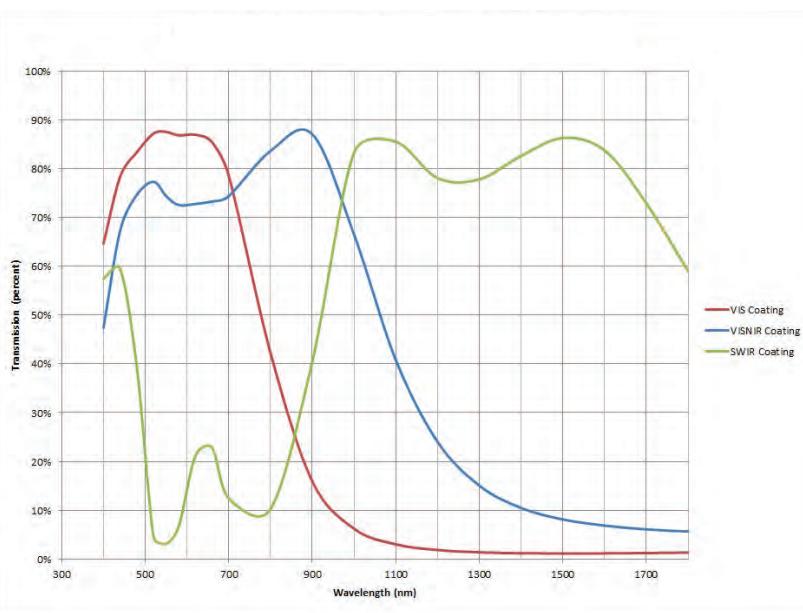

Combining Resolv4K's large field of view and exceptional lens resolution with modern high pixel density sensors results in **faster image capture** of a greater area; making it ideal for high speed inspection and precision measurement applications.

400-600% larger field of view compared to traditional zoom systems

More Wavelengths

Transmission of Resolv4K Coating Options

The Resolv4K lens series comes in visible, Vis-NIR and SWIR coating options. The visible options produce superior axial color correction to existing zoom lenses. The Vis-NIR option allows precision surface inspection in the deep blue, while performing sub-surface inspection at 1100nm without refocusing or loss of transmission. Using the SWIR goes even further beneath the surface to see damage and defects, in food and silicon wafer inspection among other applications.

SWIR and Vis-NIR options are available for the following part numbers:

| Adapters | Core Zooms and Fixed | Coax | Lens Attachments |
|----------|----------------------|---------|------------------|

More Options

The new Resolv4K Fixed system is a combination of the superb optical performance of the Resolv4K Zoom and design principles of our Precise Eye Fixed that is ideal for fixed field of view applications with closer working distances. The Resolv4K Fixed lens offers higher magnification and resolving power than standard enlarging or SLR lenses in macro mode.

- High apertures improve resolving power by 30% at familiar working distances
- Available interface modules allow users to build their system specifically for their needs
- Standard large camera format options
- Compatible with 10MP cameras and beyond
- Built-in rear adapter fine manipulation focus
- Larger focus options with motorization available
- Compatible with Infinity Corrected Objectives

For 4:3 aspect ratio sensor, Horizontal = Diagonal x 0.8, Vertical = Diagonal x 0.6

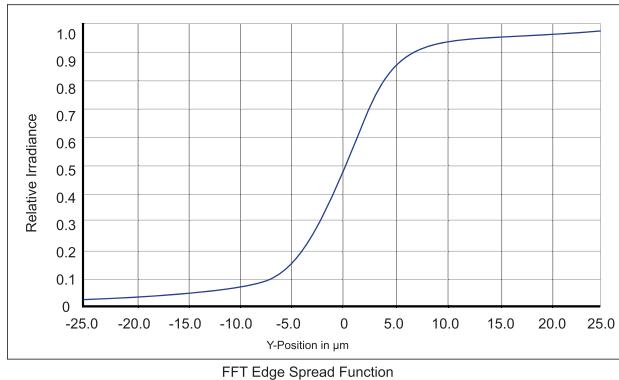

10 APS - 32mm image circle

More Field of View

Navitar's Resolv4K Series offers so much more resolving power, that a 400-600% larger field of view is possible when compared to traditional zoom imaging, without any loss of detail. No need to stitch together multiple images from multiple captures.

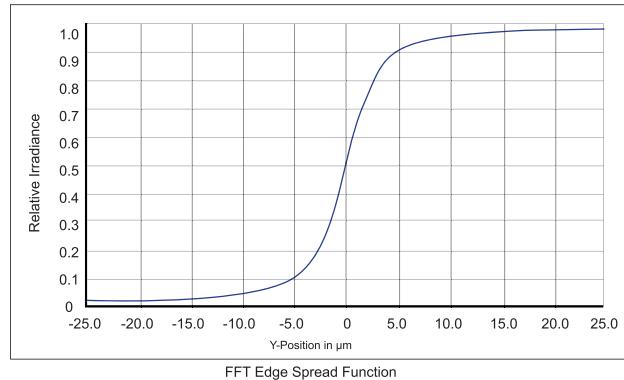

12X Zoom

13.6 μm wide transition from full off to full on.

Navitar Resolv4K Zoom

9.6 μm wide transition from full off to full on, a 30% improvement even at a significantly larger FOV and a longer working distance.

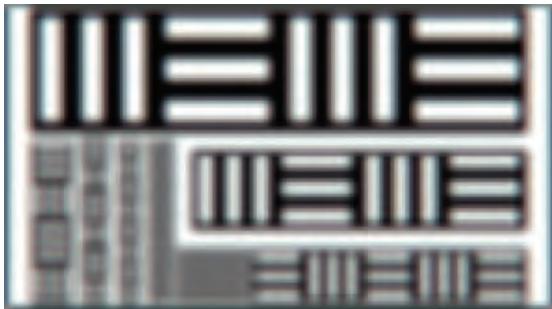

Edge spread functions indicate the lens performance of a system by showing how quickly a black to white edge transition is detected by a lens. A 10% to 90% grey level value at the sensor is shown here as indicating a full off to full on.

More Resolution

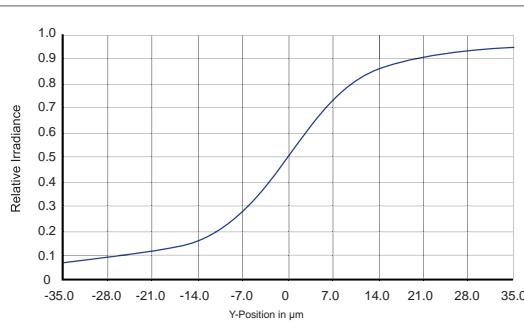

Resolv4K's higher NA, along with its superior aberration correction, gives more precise measurement capabilities than ever. Even comparing a 4.5X zoom point to a 7X mag system, the exceptional quality of the Resolv4K design delivers superior performance, as shown in the

black to white transitions in the edge spread functions below. System performance holds up all the way to the corner of the sensor, so multiple regions of interest can be set regardless of their location in your FOV. Your edge detection software will notice the difference.

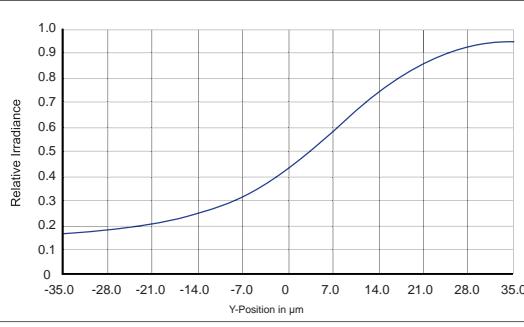

12X Zoom

12X Zoom @ 7X High Mag
2MP Sensor – 0.79 μ m / pixel
1.55mm FOV – 1.28mm² Area

ZOOM 6000 LENS SYSTEM

Unmatched Optical Performance

For high magnification applications, the Zoom 6000 series of lenses is the number one choice around the world. Recognized as the industry standard, our versatile 6.5X zoom lenses are designed to give you the magnification powers of traditional microscopes without the bulk or expense. They are easily integrated, assembled, and configured to your exact application. Compared with the competition, the Navitar Zoom 6000 series offers unmatched optical performance, repeatability and mechanical flexibility.

- Dynamic magnification range of 0.09-393.80X offers incredible versatility
- High contrast images and vivid colors help your equipment perform better
- 0.01-182.72 mm field coverage allows you to view a wide range of parts
- Working distance can be varied from 13 to 390 mm
- Add infinity corrected objective lenses to achieve unmatched edge flatness and clarity
- Body tubes with detents, apertures or motorized are available

The above fields of view are measured diagonally in millimeters (Horizontal = Diagonal x 0.8 and Vertical = Diagonal x 0.6).

(1) Working distance range when using 12 mm fine focus. Field of view will change with shorter or longer working distances.

(2) When using 5X Adapter image quality is greatly reduced. Contact your Navitar sales representative for detailed specifications.

(3) All systems using a 1" sensor should be discussed with a Navitar applications expert.

NA varies depending on system magnification.

Assumptions:

1. Minimum resolvable feature size is half of the threshold line pair limit. Calculation = $1/(3000 \times \text{Lens NA})$
2. Matching pixel size is that which will permit the minimum feature size to overlap two pixels. Calculation = $1/2(\text{Feature Size} \times \text{System Magnification})$
3. If the matching pixel size is greater than the camera pixel size, the system is "lens limited."
4. If the matching pixel size is less than the camera pixel size, the system is "camera limited."

ZOOM 6000 ULTRAZOOM

Combine Infinity-Corrected Objectives for Maximum Resolution and Magnification

Navitar's UltraZoom is ideal for semiconductor inspection, flow cytometry, and other high magnification applications. Its advanced design offers high resolution and outstanding contrast. This system incorporates infinity corrected, plan apochromatic objectives providing long working distances and excellent edge flatness and clarity. Resolution varies from 420 to 1,650 lines per mm, depending on the microscope objective used. The UltraZoom is also available with fine focus and/or coaxial illumination.

Zoom 6000™ with Co-axial Illumination

Navitar's Zoom 6000 with Internal Co-axial Illumination (1-60123) is an ideal solution for applications involving highly reflective surfaces, such as wafers, polished samples, and fluids. Designed to provide even illumination for higher magnification applications, coaxial illumination provides extremely detailed resolution, particularly when a high resolution camera is used.

NOTE:

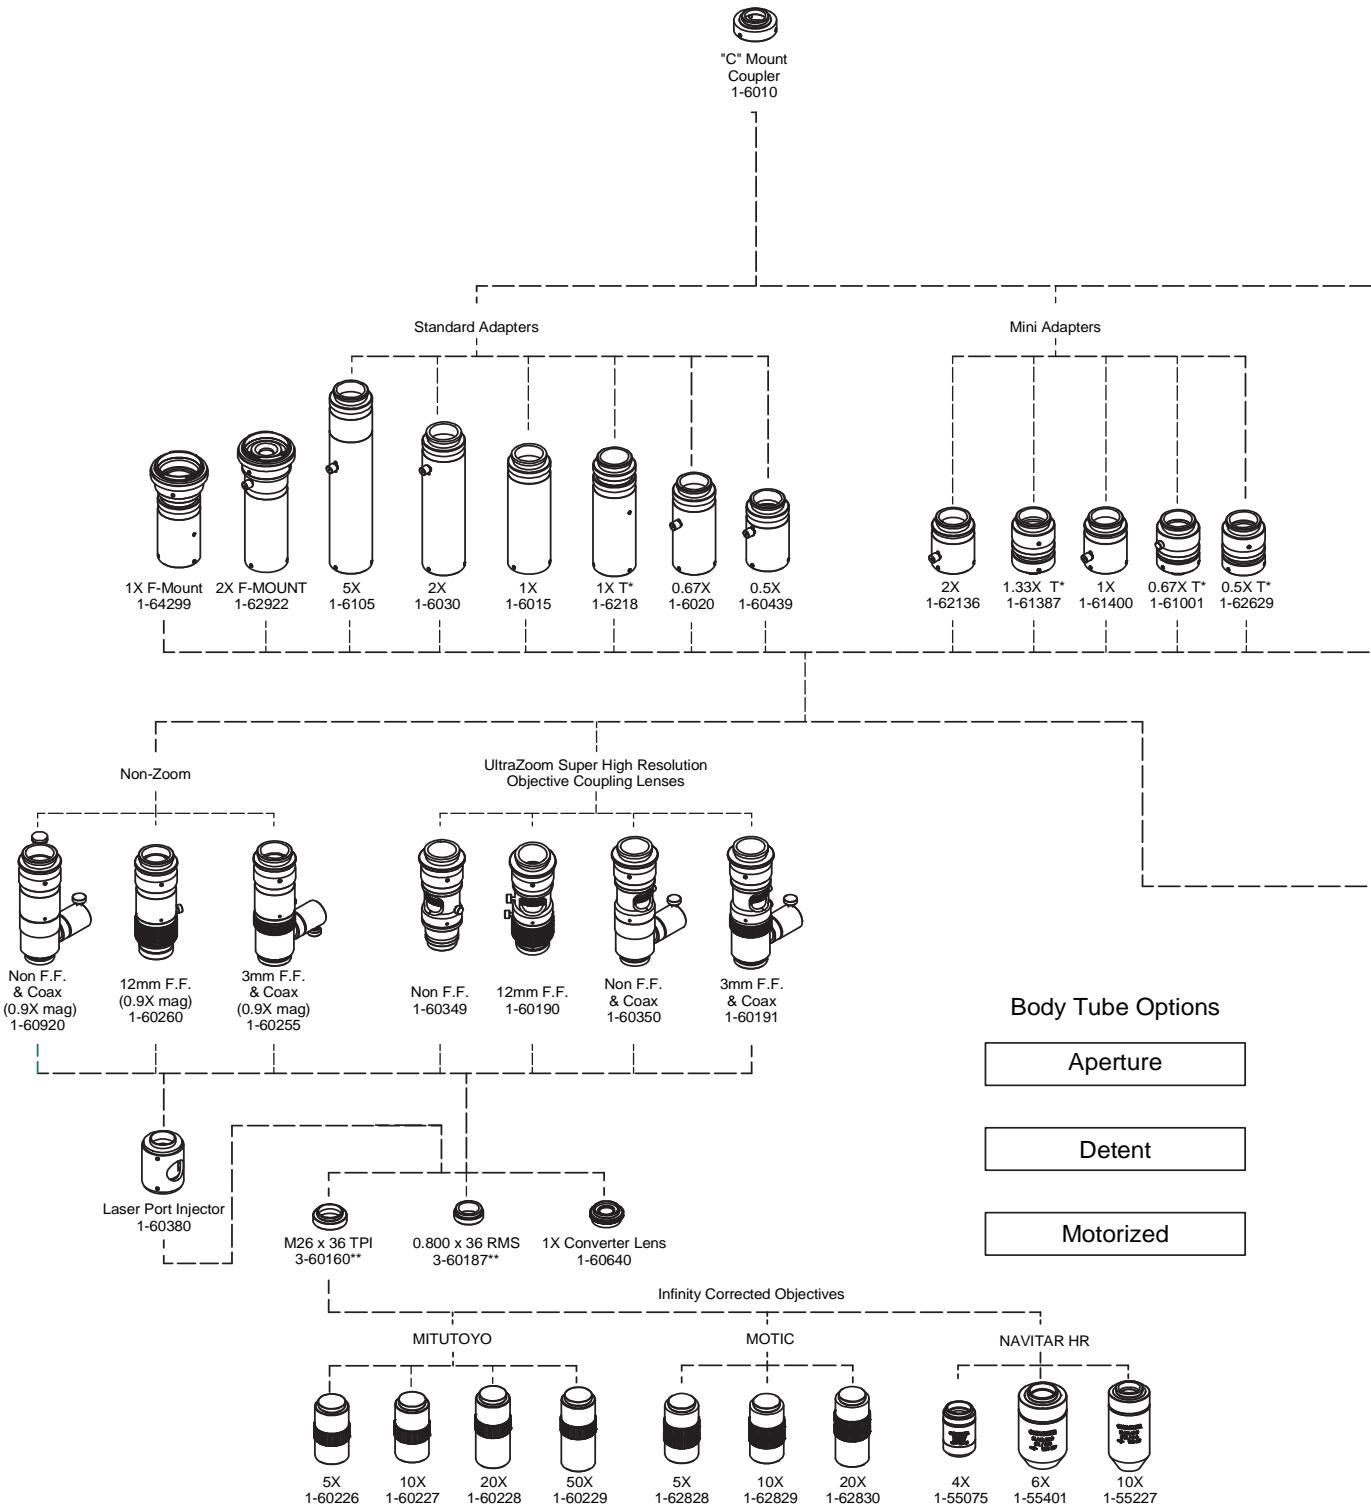

The internal coax will illuminate a circular area of about 11 mm in diameter. Any field of view larger than 11 mm will have darkened corners.

Low power lens attachments can be used but produce increasing vignetting.

(1) Working distance range when using 3 mm fine focus.

(2) Entire zoom range is not used.

OPTOTUNE LIQUID LENS

Gain greater working distance and faster focus by integrating a tunable lens focus module with the Navitar Zoom 6000 digital imaging system.

Key Features

- Fast and accurate fine focus adjustment in a compact design
- Extends working distance range of the 6X lens attachments
- Increases depth of field when coupled with infinity corrected microscope objectives
- Maintains image resolution with the integrated Optotune EL 16-40 tunable lens
- Long cycle life of the tunable lens unit and motorized Zoom 6000 system
- Easy to install USB electrical lens driver with software to control the tunable lens

12X ZOOM LENS SYSTEM

Navitar's Highest Combination of Zoom Range and Resolution

For high magnification applications requiring the optimal balance between optical performance, large zoom range and price, the 12X is an ideal choice. The 12X Zoom incorporates all the mechanical flexibility of the Zoom 6000 with extended zoom range, higher NA and unbeatable accuracy and repeatability for the most demanding applications. This outstanding combination of zoom range, coupled with large field coverage, means that you will now be able to view a wider range of parts with a single video inspection system and eliminate the need for bulky microscopes.

- Incredible 12X (0.58-7X) magnification for inspection of a wider range of parts
- Increased resolution with 0.005 - 0.550 NA
- Variable working distance from 13 to 341 mm
- Field of view from 0.006 mm to 85.71 mm with attachments
- Unmatched edge flatness and clarity
- Works with 1/4", 1/3", 1/2" and 2/3" format cameras
- The 12X Zoom System utilizes existing Zoom 6000 adapter tubes
- Body tubes with detents, apertures or motorized are available

(1) Vignetting occurs at zoom settings less than 0.9X.

(2) NA varies depending on zoom setting. The above fields of view are measured diagonally in millimeters (Horizontal = Diagonal x 0.8 and Vertical = Diagonal x 0.6).

Assumptions:

1. Minimum resolvable feature size is half of the threshold line pair limit. Calculation = $1/(3000 \times \text{Lens NA})$
2. Matching pixel size is that which will permit the minimum feature size to overlap two pixels. Calculation = $1/2(\text{Feature Size} \times \text{System Magnification})$
3. If the matching pixel size is greater than the camera pixel size, the system is "lens limited.", if less than the camera pixel size, the system is "camera limited."

12X ULTRAZOOM

Unmatched Optical Quality for High Magnification Applications

Navitar's 12X UltraZoom incorporates infinity corrected objectives in an advanced design that offers long working distances and outstanding edge flatness and clarity. The UltraZoom is also available with fine focus or with fine focus and coaxial illumination.

12X Zoom with Co-axial Illumination

Navitar's 12X Zoom with Internal Co-axial Illumination (1-50487) is ideal for applications involving highly reflective surfaces, such as wafers, polished samples, and fluids. Designed to provide even illumination for higher magnification applications, it provides extremely detailed resolution under incident lighting, particularly when a high resolution camera is used. Various illumination sources can be used.

NOTE:

The internal coax will illuminate a circular area of about 14 mm in diameter. Any field of view larger than 14 mm will have darkened corners.
Low power lens attachments can be used but produce increasing vignetting.

(1) Zoom Setting at 1.0X.

(2) NA varies depending on zoom setting

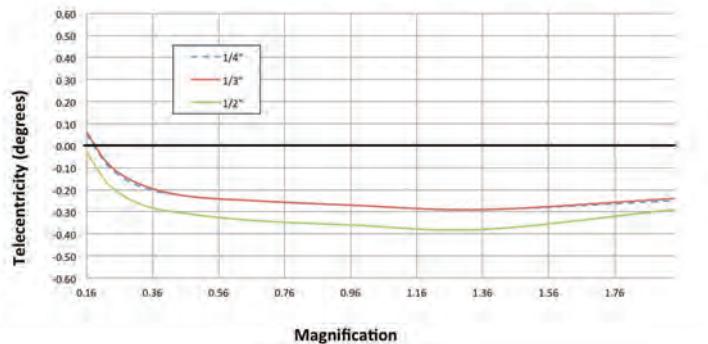

12X TELECENTRIC ZOOM

Get Precise Measurement with the 12X Telecentric Zoom

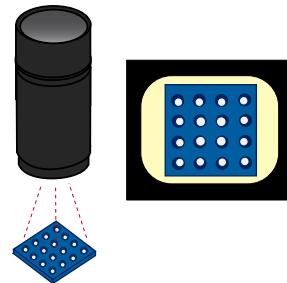

Navitar offers a 12X Telecentric zoom system that allows users to reach a true telecentric condition to within 0.4 degrees, while maintaining constant perspective and magnification. Ideal for a wide range of applications, including precise dimensional measurement of objects or pattern recognition.

There are four telecentric adapters available for use with the 12X Zoom lens: straight (no coax), straight with coax, right-angle adapter without coax and right-angle folded with coax. When combined with the 1-50993 12X zoom the telecentric attachments will have a nominal working distance of 173mm +/- 2mm. The working distance can be modified by the factory from 165 to 186mm. Magnifications range from 0.16X to 1.94X with the 1X adapter, and 0.32X to 3.88X with the 2X adapter. Maximum field of view is 50 mm. An upper 2X F-mount adapter may be used to couple an F-Mount camera.

NIR Lens System for Zoom 6000, 12X Zoom and Precise Eye

Navitar's NIR Zoom lens system offers high resolution and unparalleled sensitivity for capturing microscopic images. We have specially coated the glass on our high magnification systems to be optimized for imaging in the 700-1550nm wavelength range.

Body tubes with detents and apertures or motorized systems are available.

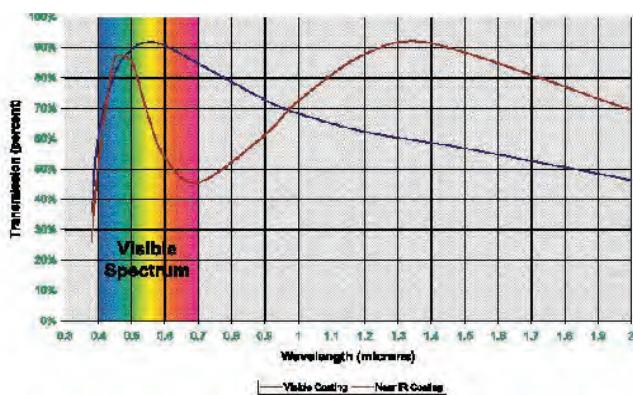

Note: Since NIR lenses are not operating within the visible spectrum, the resulting image is slightly different than when using a standard zoom system. The standard lens resolution limits of an NIR lens are based on an assumed average wavelength of 0.5 microns and is inversely proportional to wavelength (maximum MTF = 3000xNA in the visible wavelength). Therefore, substituting a wavelength of 1.5 microns will reduce the maximum resolution by a factor of 3. In practice, this means a slight reduction of contrast at the higher wavelengths.

(When changing wavelengths in the NIR region minor refocus might be required.)

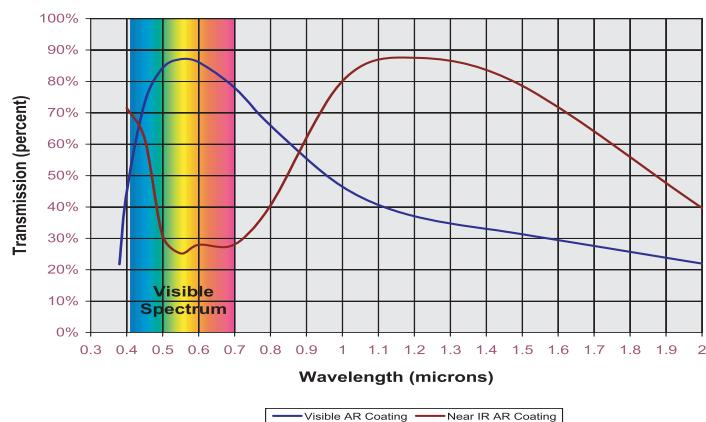

Applications Where Navitar NIR Optics are Useful

- Wafer characterization
- Laser beam profiling
- Optical component measurement and analysis
- Fiber alignment and inspection
- Assembly and monitoring
- Hyperspectral microscopy

12X ZOOM SYSTEM DIAGRAM

Differential Interference Contrast (DIC) Modules

Available for Zoom 6000 and 12X Zoom Systems

Two Differential Interference Contrast (DIC) modules are available from Navitar:

- DIC Assembly Nikon-High Resolution module (1-63726)
- Original DIC Assembly module (1-63102)

Both modules can be used on any ultra coax version (zoom or non-zoom) of the Zoom 6000 and 12X Zoom.

DIC, when used with brightfield illumination, can often be interpreted as a true three-dimensional representation of the surface geometry. It provides a clear distinction between raised and lowered regions in the specimen being viewed.

Using the DIC module in reflected light situations

Two polarizers, one in the illumination axis and one in the viewing axis, are crossed at 90 degrees such that when looking at a perfectly mirrored surface all light is extinguished by the second polarizer.

A prism, made from two pieces of quartz, is then placed between the illuminator beamsplitter and the objective. Due to the optical properties of the quartz, the polarized beam is split into two. The two beams, separated by a minuscule amount, are polarized at 90 degrees to each other and one beam is shifted in relation to the other - a phase shift.

If the subject being viewed exhibits properties that change the length of the optical path of either beam (such as surface profiles, optical densities, etc.), both beams will experience further phase shifts.

With transverse movement of the prism the phase shifting performance of the prism may be accentuated and the final image is modified. By adding a polarization modifier, such as a 1/4 wave plate, after the illumination polarizer, the final effects are modified further.

The DIC module works with object side NAs ranging from 0.05 to 0.50, with optimum performance in the range from 0.15 to 0.4. Lens attachments, operating in the above range will serve for macro applications. Any infinity corrected objectives designed for incident light will suffice for micro applications. Operating parameters, such as magnification and FOV, will be the same as Navitar's existing tables for the zoom system being used.

DIC MODULE SYSTEM DIAGRAM

ZOOM 6000 & 12X ZOOM ACCESSORIES

Right Angle Accessories

The RA mount (1-6080) introduces a 90° bend in the optical axis, shortening the overall length of the system. The resulting image will be mirrored, thus erect and read backwards from right to left when viewed with a camera.

Non-Inverting Right Angle Accessories

The Non-Inverting RA mount (1-60165) introduces a 90° bend in the optical axis. The use of a penta prism results in an image that is erect and reads left to right.

Object Side Inverting & Non-Inverting Right Angle Attachments

Navitar offers a series of attachments that are fitted to the object side of our Zoom 6000 and 12X systems. See system diagrams.

Adapter Plates

Navitar offers a variety of different microscope converter plates so you can use your zoom system with Nikon, Olympus, Meiji, and Leica focus mounts.

Polarizer/Analyzer

When used in conjunction with a polarized light source, an analyzer (1-60816) allows for cross polarization of the light in the imaging system. This reduces reflections that can deteriorate the image quality. The analyzer must be used in conjunction with the right angle adapters.

If you choose to add a polarization option to your lens system, it requires an illumination polarizer (2-62827), an analyzer above the zoom, a quarter wave plate (optional), and a shorter version of an Adapter (RA) because the analyzer shortens the optical path by 50.8 mm.

Aperture Control

Lens systems can be designed with an internal iris that can be manipulated without cutting into the field of view. The iris permits the reduction of image intensity at the image plane, which reduces "blooming" and other damaging artifacts. The iris can also be closed down to essentially "stop down" the lens to reduce the Numerical Aperture of the lens. This narrowing of the light gathering cone produces a significant increase in the depth of field.

Laser Injection Port

Navitar's Laser Injection Port (1-60380) provides a means of introducing a laser beam into the Zoom 6000 system. It is normally used between the end of the zoom lens and an infinity corrected objective so that the objective condenses the laser beam into a highly concentrated spot. A beamsplitter cube, rather than a plate, is used to minimize aberrations.

Auxiliary Viewing Port

The Auxiliary Viewing Port (1-60370) provides a second output port for an additional camera or for direct vision using an eyepiece. A 50/50 beam splitter cube is used for minimal image degradation.

Infinity Corrected Objectives

Infinity Corrected Objectives can be attached to any UltraZoom to increase the system magnification and decrease working distance.

Quarter Wave Plate

A Quarter Wave Plate (1-60981) has the unique feature of taking the polarized light and circularly polarizing the beam (sort of a spiraling effect). When this beam reflects off a specular object, the spiraling reverses, and upon re-striking the quarter wave plate, the beam is extinguished. This technique is useful in eliminating reflections from wafers and circuit boards. For use with Zoom 6000 Coaxial lens.

Zoom Xtender

The Xtender is designed to offer working distances beyond that achievable with standard attachments.

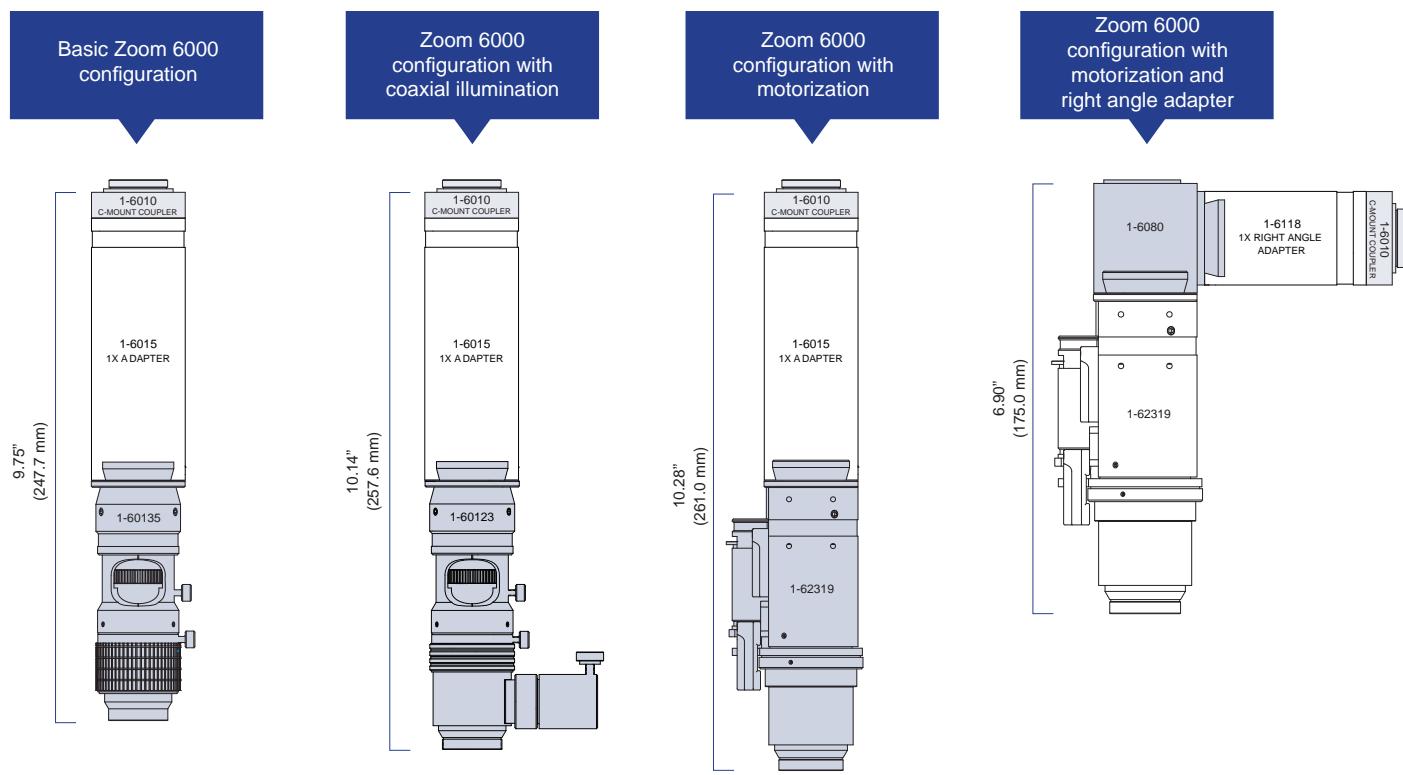

F-Mount Zoom Adapters

F-mount adapters allow use of F-mount Cameras. Not recommended for use with the 12X Zoom System with sensors over 16 mm, or the Zoom 6000 sensors over 30mm.

MOTORIZED SYSTEM OPTIONS

More Robust Design

Navitar's motorization design, available on the 12X and Zoom 6000 systems, integrates magnetic Hall Effect sensors with reference position location. Hall Effect sensors are solid state devices with no moving parts.

Integrated Hall Effect Solid State Sensor Technology

- Unaffected by ambient light
- Unaffected by environmental contamination
- Unaffected by line voltage

Users can choose to motorize both the zoom and focus axis, or just the zoom. Navitar offers three different motor types:

- 2-Phase Stepping Motor (Faulhaber)
- 5-Phase Stepping Motor (Oriental, Vexta)
- DC Servo with Encoder (Faulhaber)

Most motorized lenses are built to order, which may affect standard lead times.

Motorized Zoom 6000 Options

| Version | Motor Type | | |
|-----------------------------------|----------------|----------------|-------------------|
| | 2 ø Stepper | 5 ø Stepper | Encoded/ Servo |
| 12 mm Motorized Fine Focus | 1-62318 | 1-64426 | 1-62310 |
| 3 mm Motorized Fine Focus w/ Coax | 1-62319 | 1-64428 | 1-62311 |
| 12 mm Manual Fine Focus | 1-62523 | 1-64430 | 1-62522 |
| 3 mm Manual Fine Focus w/ Coax | 1-62525 | 1-64432 | 1-62524 |
| Non Fine Focus, Non Coax | 1-62605 | 1-64434 | 1-62606 |
| Non Fine Focus w/ Coax | 1-62608 | 1-64436 | 1-62609 |

Motorized Zoom 6000 UltraZoom Options

| Version | Motor Type | | |
|-----------------------------------|----------------|----------------|-------------------|
| | 2 ø Stepper | 5 ø Stepper | Encoded/ Servo |
| 12 mm Motorized Fine Focus | 1-62316 | 1-64439 | 1-62308 |
| 3 mm Motorized Fine Focus w/ Coax | 1-62317 | 1-64441 | 1-62309 |
| 12 mm Manual Fine Focus | 1-62517 | 1-64443 | 1-62516 |
| 3 mm Manual Fine Focus w/ Coax | 1-62639 | 1-64445 | 1-62633 |
| Non Fine Focus, Non Coax | 1-62637 | 1-64447 | 1-62631 |
| Non Fine Focus w/ Coax | 1-62638 | 1-64449 | 1-62632 |

Motorized 12X Zoom Options

| Version | Motor Type | | |
|-----------------------------------|----------------|----------------|-------------------|
| | 2 ø Stepper | 5 ø Stepper | Encoded/ Servo |
| 12 mm Motorized Fine Focus | 1-51188 | 1-52000 | 1-51190 |
| 3 mm Motorized Fine Focus w/ Coax | 1-51200 | 1-52002 | 1-51202 |
| 12 mm Manual Fine Focus | 1-51319 | 1-52004 | 1-51337 |
| 3 mm Manual Fine Focus w/ Coax | 1-51311 | 1-52006 | 1-51338 |
| Non Fine Focus, Non Coax | 1-51314 | 1-52008 | 1-51335 |
| Non Fine Focus w/ Coax | 1-51318 | 1-52010 | 1-51336 |

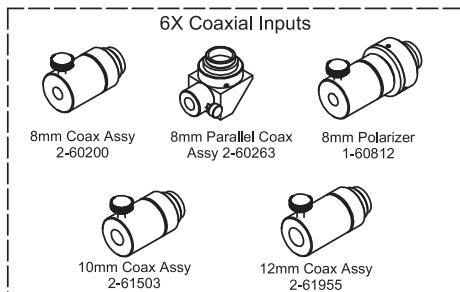

NOTE: Zooms using 5 phase stepping motors require user to order the correct cable harness between zoom and controller.

Mounting Options for Motorized Lenses

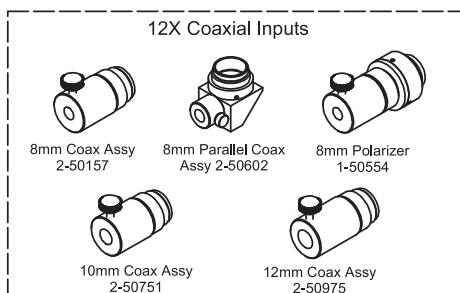

Navitar also offers flat mounting assemblies for easy integration of our motorized zoom lenses into any application. The flat mounts securely attach to the zoom body using 4 hex screws. Four additional 1/4-20 thru holes are integrated into the mounts to provide a robust attachment point to a machine surface.

| 6X | 12X |
|--------------------|--------------------|
| 1-62572 (Standard) | 1-51272 (Standard) |
| 1-64546 (Imperial) | 1-52045 (Imperial) |
| 1-64547 (Metric) | 1-52046 (Metric) |

Coaxial Inputs for Motorized Lenses

| Coaxial Inputs for Zoom 6000 | Description and Fiber Input Size |
|------------------------------|----------------------------------|
| 2-60200 | 8 mm diameter |
| 2-61503 | 10 mm diameter |
| 2-61955 | 12 mm diameter |
| 2-60263 | 8 mm parallel coaxial |
| 1-60812 | 8 mm polarizer |

| Coaxial Inputs for 12X Zoom | Description and Fiber Input Size |
|-----------------------------|----------------------------------|
| 2-50157 | 8 mm diameter |
| 2-50751 | 10 mm diameter |
| 2-50975 | 12 mm diameter |
| 2-50602 | 8 mm parallel coaxial |
| 1-50554 | 8 mm polarizer |

*Coax parts must be ordered separately for all motorized lenses.

Motorized Controllers

All Navitar 12X and Zoom 6000 motorized systems can be ordered with a fully integrated control system, featuring single or dual axis control via serial RS-232 or USB.

Software includes Demo Application User Interface "GUI" for simple axis control. Connections are made via two 15-pin high density d-sub connectors. Arrangements can be made for supplying the underlying software code for OEM platform assimilation.

System Requirements

Operating Systems Supported for Serial RS-232 and USB:

- Windows 7, 8.1, 10 (32 & 64 bit)

Computer Requirements:

- Windows Operating System (OS)
- Port: 1 serial or 1 USB port (can be a hub)
- Hard Disk: 1 M bytes
- RAM: Same as OS (if OS works, controller will work)

Available Control Systems

| Part # | Description |
|---|--|
| Board Level | |
| 1-40241 | 2 phase stepper PCB Kit |
| 1-40167 | 5 phase stepper PCB Kit |
| 1-40242 | Encoded PCB Kit |
| Enclosures | |
| 1-40233 | 2 phase flanged enclosure |
| 1-40234 | 2 phase desktop enclosure |
| 1-40168 | 5 phase flanged enclosure |
| 1-40169 | 5 phase desktop enclosure |
| 1-40237 | Encoded flanged enclosure |
| 1-40238 | Encoded desktop enclosure |
| Accessories & Power Supplies | |
| 1-40170 | 5 phase cable harness |
| 8-62503 | 24V Domestic power supply |
| 8-62501 | USB cable (6 feet) |
| 8-62502 | RS-232 cable (6 feet) |
| 1-40040 | 24V Universal Power Supply w/ Plug Kit |

| Part Number | Output Connector | Input Voltage | Universal Plug Kit | | |
|-------------|------------------|---------------|--------------------|-------|-------------------|
| 1-62504 | 2.1mm x 5.5mm | 86-286vAC | 24vDC | 1.5A | Std. US Plug |
| 8-62503 | 2.1mm x 5.5mm | 120vAC | 24vDC | 1.05A | Std. US Plug |
| 1-40040 | 2.1mm x 5.5mm | 90-264vAC | 24vDC | 1.25A | Medical Rated Yes |

High Magnification for Fixed Inspection Applications

Navitar's Precise Eye series of lenses is designed to provide superior optical performance over standard C-mount video lenses.

- High resolution, f/4.5 optical quality for high precision measurement and inspection
- Long working distance makes lighting and handling easier
- Coaxial lighting available for shadow-free illumination
- Compatible with high-magnification infinity corrected objectives
- Mechanically stable for the most demanding vibration environments
- Modular design for flexibility
- Optics attach to any C-mount camera
- Short tube length (~4 inches/101.6mm) and small diameter (1.25 inches/31.8mm)
- Allows for coaxial illumination and/or 3 mm fine focus
- High transmission (>70%) over the visible to near IR spectrum

Assumptions:

1. Minimum resolvable feature size is half of the threshold line pair limit. Calculation = $1/(3000 \times \text{Lens NA})$
2. Matching pixel size is that which will permit the minimum feature size to overlap two pixels. Calculation = $1/2(\text{Feature Size} \times \text{System Magnification})$
3. If the matching pixel size is greater than the camera pixel size, the system is "lens limited.", if it's less than the camera pixel size, the system is "camera limited."

Greater Resolution and Magnification

Navitar offers a variety of Ultra Precise Eye systems ideal for high magnification applications. The advanced design produces outstanding contrast and precision, while providing higher resolution and magnification than the standard Precise Eye. These systems incorporate infinity corrected objectives to provide long working distances and excellent edge flatness and clarity. The Ultra Precise Eye is also available with fine focus (1-61521) or with fine focus and coaxial illumination (1-61522).

NOTE: The O-I remains constant for each body tube (main assembly) regardless of which infinity corrected objective and adapter are selected: 1-61517 I-O = 219 mm, 1-61521 I-O = 243 mm, 1-61522 I-O = 263 mm. NA varies with zoom setting.

Precise Eye with Co-axial Illumination

Navitar's Precise Eye with Internal Co-axial Illumination (1-61446) is an ideal solution for applications involving highly reflective surfaces, such as wafers, polished samples, and fluids. Designed to provide even illumination for higher magnification applications, coaxial illumination provides extremely detailed resolution, particularly when a high resolution camera is used.

PRECISE EYE SYSTEM DIAGRAM

High-Mag Microscopy Solution

The NUV-VIS Zoom is a motorized imaging lens system that operates within a spectral range of 330nm to 700nm and offers a 6.2:1 zoom ratio. It is an ideal digital imaging solution for high magnification microscopy and OEM applications such as protein crystallography, forensic evidence analysis and surface defect inspection.

- Designed for a 2/3" sensor
- Focal length range of 80-497mm
- Motorized for easy magnification adjustments
- Combine with infinity corrected imaging microscope objectives, Plan Apo NUV long working distance microscope objectives, and high power UV focusing objectives
- Operates within 330nm to 700nm spectral range
- Can be modified for manual actuation

MODULAR TUBE LENS SYSTEM

Navitar's new line of modular tube lenses offer the ideal optical solution for OEM and research imaging and measurement applications including metrology, flat panel inspection and cell imaging.

- 200mm focal length design for use with infinity corrected objectives
- 0.5x, 1x and 2x magnification modular tube lenses will cover camera sensors from 11-33mm
- 2 and 3 position objective changer available for using multiple objectives and magnifications
- Use with Brightfield, Transmitted, Reflected, and Köhler illumination techniques for high resolution images
- Perfect for industrial and life science applications

High Resolution Plan APOCHROMAT INFINITY CORRECTED OBJECTIVE LENSES

Ideal for industrial imaging applications

Navitar HR plan apochromatic objectives offer high NA, large FOV, and working distances ranging from 10-39mm.

The objective series includes 1X, 2X, 4X, 6X, and 10X resolutions.

- Designed with a parfocal distance of 95mm to be compatible with turret applications
- Apochromatic over 436-656 nm, providing excellent correction of spherical and chromatic aberrations.

4K HDR Lenses

Navitar offers compact, lightweight, HDR wide angle lenses designed for use with 12-16 Megapixel 1" format cameras with a 2.4um or 3.45um pixel pitch. The Centaur and Unicorn lenses are athermal over the operating temperature range and capable of day-night band operation 450nm to 850nm simultaneously.

- All glass construction
- Rectilinear distortion correction (Falcon Narrow & Dragon Narrow)
- F-Θ distortion (Falcon & Unicorn)
- Telecentric
- Athermal operation
- Superior stray light rejection
- Optimized for HDR imaging applications
- Survival temperature range -40C to +70C
- Operating temperature range -20C to +50C

Illumination Products

Navitar offers LED ring lights, Brightlight LED coaxial illuminators, fiber optic illuminators, and power supplies.

Fiber Optic Lighting

These fiber optic illuminators consist of a Halogen illumination system with a variable light intensity control. They accept a single or dual light pipe or an attachable ring light for illuminating a wider area. These illuminators offer low operating temperature and low noise output.

Available Fiber Optic Accessories

| Model | Description |
|---------|--|
| 1-6192 | Ring light w/ 1.28" inside diameter, 0.5" input ferrule, 3 foot length (Also available in 6ft, 8ft, 10ft and 15ft lengths) |
| 1-61214 | Ring light w/ 1.28" inside diameter, 0.718" input ferrule, 3 foot length (Also available in 6ft and 8ft lengths) |
| 1-60926 | Ring light w/ 4.5" inside diameter, 0.718" input ferrule, 3 foot length |
| 2-50017 | Ring light adapter for any 12X with fine focus |
| 1-60106 | Flexible light pipe for co-axial, 0.5" input ferrule, 3 foot length (Also available in 6ft, 8ft, 10ft, 12ft and 15ft lengths) |
| 1-60162 | Flexible light pipe for co-axial, 0.718" input ferrule, 3 foot length (Also available in 6ft, 8ft and 12ft lengths) |
| 1-6267 | 2" x 2" fiber optic back light, 0.718" input ferrule, 40" length |
| 8-61313 | Dual gooseneck, 0.718" input ferrule |
| 1-60787 | Coupler to convert 0.5" input ferrule to 0.718" input ferrule |
| EKE | Long-life replacement lamp; 200 hour life, 21V, 3250° K |
| EJV | Standard replacement lamp; 40 hour life, 21V, 3350° K |

Fiber Optics Power Supplies

Navitar offers a selection of compact, rugged, AC/DC Halogen light sources with solid state dimmers for variable light intensity and maximum lamp life.

| Model | Description |
|---------|---|
| 8-61172 | 120 volt fiber optic power supply, 150w EKE lamp, 0.720" fiber receptacle (CSA, UL, CE compliant) |
| 1-60563 | 220 volt fiber optic power supply, 150w EKE lamp, 0.720" fiber receptacle (CSA, UL, CE compliant) |
| 8-61892 | 90-265 volt DC regulated fiber optic power supply, 150w EKE lamp, 0.720" fiber receptacle (CSA, UL, CE compliant) |
| 1-63720 | Light Source DC regulated 150W, 120/220V. CSA and CE certified. |

Internal Coaxial Input Ports

| For Zoom 6000 | Description |
|---------------|--------------------------------------|
| 2-60200 | 8 mm diameter fiber input |
| 2-61503 | 10 mm diameter fiber input |
| 2-61955 | 12 mm diameter fiber input |
| 2-60263 | 8 mm diameter input parallel coaxial |
| 1-60812 | 8 mm diameter input polarizer |

| For 12X Zoom | Description |
|--------------|--------------------------------------|
| 2-50157 | 8 mm diameter fiber input |
| 2-50751 | 10 mm diameter fiber input |
| 2-50975 | 12 mm diameter fiber input |
| 2-50602 | 8 mm diameter input parallel coaxial |
| 1-50554 | 8 mm diameter input polarizer |

LED Illumination

Two LED based products are available from Navitar: Brightlight coaxial illuminators and Ring Light illuminators. Designed to match the optical performance of our vision systems, each illumination system was created to work with a specific system, such as Navitar's Zoom 6000, 12X Zoom or Precise Eye system. Each lighting component incorporates the correct number of individual LEDs, placed in the optimal optical position, to provide powerful, even illumination across a given field of view.

Benefits Include:

- Longer life
- Minimum power loss
- Narrow wavelength band (red), constant color temperature (white)
- Small packaging with optimal heat management
- No fan vibration
- Lower cost

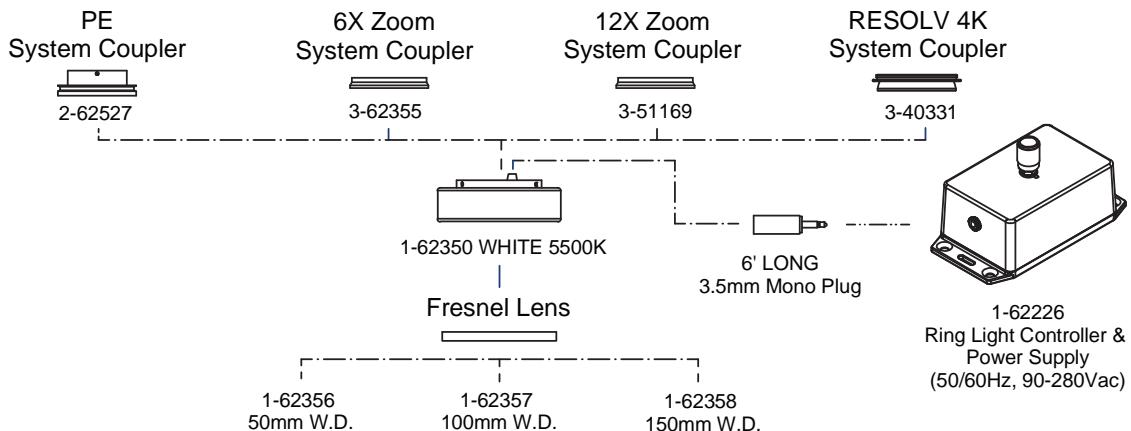

Navitar can manufacture fiber bundles and ring lights in any length. Please contact Navitar directly with your specific requirements.

LARGE FORMAT IMAGING

Large Format Lenses

Navitar's large format lenses, including brands like Kowa and Zeiss, meet the demands for high center to edge resolution, low distortion, and application specific F-numbers. These lenses are not modified video lenses; they are designed to match the performance abilities of high-end megapixel type cameras.

Navitar Lenses

25mm Platinum Lens

Our innovative 25 mm multi-magnification lens (1-15838) works with F-mount or C-mount cameras and offers 200 line pairs per millimeter resolution. Ideal for vision system applications, this wide-angle lens is designed to allow cameras to inspect large areas without the great distance required by a typical lens.

Navitar's 25 mm lens features a fixed F/8 aperture which allows for a balance between depth of field and resolution while maintaining significant light-gathering power. It has 42 mm image coverage and a depth of field ranging from 15.4 mm at 0.1X to 1.1 mm at 0.5X. Its low distortion permits cameras to determine dimensional measurements without the need for software calibration on vision systems.

25 mm Platinum Lens Features

- Magnification from 0.1X to 0.5X
- Focusable from 2" to infinity
- 0.13% distortion on edges
- Wide field design for close-up imaging
- Large depth of field
- Diffraction limited
- Exceptional clarity and contrast

Zeiss Lenses

Zeiss ZF lenses offer the image quality associated with professional photography for technical and industrial applications. The ZF lenses are compatible with the Nikon F-Bayonet, the globally recognized standard for high-resolution industrial cameras with large format image sensors.

Zeiss ZF lenses feature manual focusing of the highest precision and the robust design. High image definition, color purity, stray light absorption, and excellent distortion correction.

Kowa Lenses

These large format lenses are optimized for machine vision, inspection, quality control, etc. Their rugged, compact design makes them ideal for demanding applications. Low distortion allows them to be used for close distance inspection and correspond to 4K line scan cameras.

Navitar Factory Automation Lenses

Navitar offers quality video lenses from wide angle to telephoto all with high resolution, low distortion and even illumination across the image plane of your camera.

Our large selection of low magnification video lenses includes Fujinon, Kowa, SWIR, Zoom 7000, etc. for industrial applications. Quality construction coupled with precision engineering results in video optics that are sharp, high resolution and optically precise.

NOTES:

All Fujinon "HF" lenses come with focus and iris locking screws.

* Using an extension tube longer than 5mm will increase the M.O.D. to 0.3m.

** Using an extension tube longer than 5mm will increase the M.O.D. to 0.5m.

SWIR / Hyperspectral Lenses

Navitar's fixed focal length SWIR/Hyperspectral lenses are specifically designed for SWIR (short wave infrared) cameras and applications. Lenses are available from 8mm to 50mm focal lengths. These lenses are ideal for a variety of imaging applications where SWIR cameras are employed such as perimeter surveillance, food sorting, toll-way monitoring, border and port security, quality control or aerial imaging.

Custom SWIR Lens Design Experience

Navitar offers custom-designed SWIR solutions and welcomes your project request. We have designed and built several custom lenses, including a system that detects visible near infrared (NIR) and short wave infrared (SWIR) wavelengths (500 - 1600 nm). The custom design was a F/1.35, 25 mm, C-mount lens.

Please contact your account manager for a custom SWIR quote today.

Video Lens Accessories

Extenders (for use with all lenses except SWIR)

A range extender, installed between the lens and camera, will extend the focal length and increase the effective aperture (F/number) of a video lens. For example, using the 2XE range extender will extend the focal length by two times (2X) and double the effective aperture of the following lens: (2X) 50 mm, F/1.3 lens = 100 mm F/2.6

Extention Tube Kit

We also offer an extension tube kit, which allows you to turn standard fixed focal length lenses into macro lenses. The tube(s) mount between the camera and the lens, making it possible for you to focus a C-mount lens at a much closer distance.

Available Accessories

| Model | Description |
|-------------|--|
| HE15-1 | 1.5 X Extender, 13.08 mm long, Ø45 |
| HE20-1 | 2.0X Extender, 13.74 mm long, Ø45 |
| 2XE | 2.0X Extender, 11.12 mm long, Ø31.92 |
| NMV- EXT | Extension Tube Kit, 5 pieces, 36.5mm total (0.5 mm, 1 mm, 5 mm, 10 mm, 20 mm) |
| 3-6073 | 5 mm Extension Tube |

Converter Lens for Block Cameras

Navitar Converter Lenses

Block cameras have long been used for numerous security, surveillance and industrial applications. Until recently, however, there were very few high quality converter lenses either to improve long-distance viewing or increase magnification.

Ideal for use in Unmanned Aerial Vehicles (UAVs), border security, and industrial automation, Navitar's converter lenses are compact and lightweight, and offer higher quality and a greater range of magnifications than those currently on the market.

Technical Information

Navitar's converter lenses easily interface with block cameras to provide optimal zoom ranges. Relative illumination ranges from 50% to 88%. Part numbers and descriptions may be found below. For outline drawings and specifications detailing optical performance and FOV changes, visit navitar.com

Mounting Options

Navitar recognizes that each customer's application is unique. Our design team will work closely with each user to develop the best mounting option for your specific project.

Camera Testing

Navitar has tested several cameras with the converter lenses, including Sony's FCB-980S, FCB-EX1000, FCB-H10, FCB-H11, and FCB-EX1020.

Because of the vast number of camera product offerings available we will arrange for a lens to be sent to your company for testing.

Designs exist for magnifications ranging from 4X to 0.4X. Please call for more information.

| Part Number | Description |
|-------------|-----------------------|
| 1-19271 | 2X Teleconverter Lens |

12X Telecentric Zoom System

The 12X Telecentric Zoom system allows users to reach a true telecentric condition to within less than 0.4° while maintaining constant perspective and magnification. This means that even if the object is slightly out of focus, the size of the image will not change. The 12X Telecentric Zoom provides field coverage from 50 mm down to 4 mm and the coaxial illumination allows clear viewing, even when working with mirror-like surfaces. Also available without coaxial illumination.

Wide Magnification Range and Ultra Long Working Distance

When combined with the 1-50993 12X zoom the telecentric attachments will have a nominal working distance of 173mm +/- 2mm. The working distance can be modified by the factory from 165 to 186mm. Magnifications range from 0.16X to 1.94X with the 1X adapter, and 0.32X to 3.88X with the 2X adapter. Maximum field of view is 50 mm. An upper 2X F-mount adapter may be used to couple an F-Mount camera.

Video Telecentric

TC-5028

The Navitar TC-5028 telecentric lens is a 50 mm F/2.8 telecentric lens which reduces or eliminates viewing angle error and magnification error while providing high resolution and contrast with low distortion. This compact, lightweight lens can be used with 1/3", 1/2" and 2/3" format cameras and is usable from 0.5X to 1.0X, 1:1.

| Specifications for Telecentric Use | |
|------------------------------------|-------------------------|
| Magnifications | 0.5 1.0X |
| Distortion at 0.5X | -0.3% |
| Distortion at 1.0X | Less than - 0.1% |
| Distance from Front Lens to Object | 0.5X:115mm 1.0X:85mm |

| TC-5028 Video Lens Specifications | | |
|-----------------------------------|-------|-------------------------|
| Focal Length | | 50 mm |
| Iris Range/ F-Stop | | 2.8 - Close |
| Control | Iris | Manual |
| | Focus | Manual |

Our Projection Expertise

Navitar has designed and produced world-class projection lenses since 1978. We offer a wide range of replacement, conversion, fisheye, and custom projection lenses for projectors up to 4K resolution.

Our projection lenses are ideal for corporate and education facilities, planetariums, museums, simulation, immersive environments, and amusement attractions.

HemiStar® Fisheye Projection Lenses and Custom 4K Designs

Navitar's HemiStar lenses are ideal for small, medium and large planetariums, as well as simulation and immersive projection.

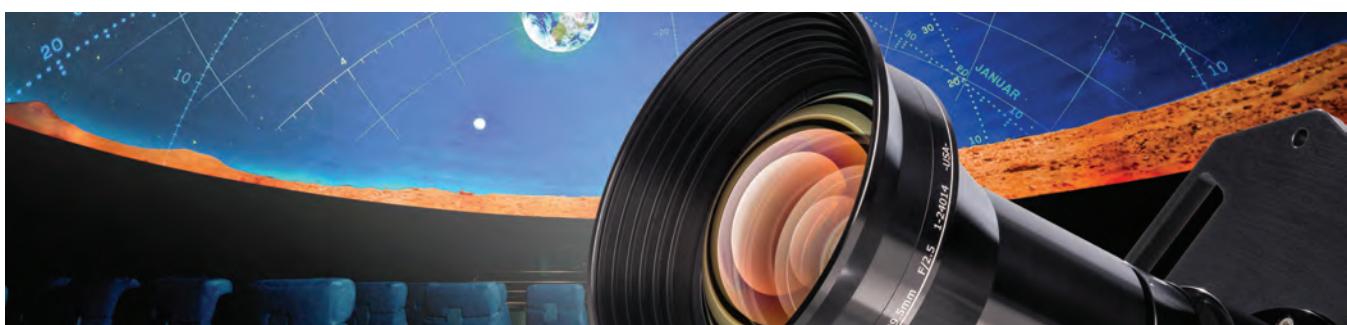

Our fisheye projection lenses have an almost infinite depth of focus, allowing them to maintain sharpness in a variety of settings. We offer both single and multi-projector solutions for 2K and 4K resolution.

Our designs are engineered for peak power and continual thermal cycles through on/off routines. Lenses work with traditional Xenon based light engines up to 40K ANSI lumens as well as 6P platforms up to 60K ANSI.

Our projection expertise includes:

- Relay and Non-Relay Designs
- Rectilinear and Fisheye Designs
- Fisheye Lenses and F-theta Distortion
- Uniform Pixel Mapping at Image Edge
- Unique Chip Sets, Color Off-Sets
- Panel Size Variations in Light Engines
- Customer Masking Requirements
- Tolerance and Sensitivity Analyses

NuView® Replacement Lenses

NuView lenses replace the existing prime lens of your projector and allow you to use your projector in a variety of applications. NuView lenses are compatible with LCD, DLP, DILA and LCOS projectors.

Use a long throw lens to increase projection distance and move your projector farther from the screen.

Use a wide angle lens in rear screen applications or to produce much larger images for front projection.

The zoom feature allows you to choose your projection distance and image size by simply rotating the lens.

ScreenStar® Conversion Lenses

Navitar's ScreenStar conversion lenses are placed in front of your projector's standard lens to change image size or throw distance. These lenses decrease the overall cost of installation by allowing you to reduce the number of projectors being used, or by selecting a lower cost, less featured projector.

ScreenStar lenses work with LCD, DLP, DILA and LCOS projectors.

Imaging and Microscopy Cameras

We offer a wide variety of high-performance CMOS and CCD cameras for your most demanding industrial and microscopy applications.

- Available in 1 MP to 20 MP resolutions
- Fast frame rates
- High resolution, low noise images
- Board level and enclosed models
- Software Development Kit
- Pixelink Capture software
- Customization for OEM
- Autofocus feature available

HDR Imaging Cameras**PL-D757 & PL-D753**

HDR imaging is a technique used to render a captured image with a greater dynamic range of luminosity than is possible with standard digital imaging. A key feature of the 3rd generation Sony Pregius CMOS sensors is a Dual ADC mode where each pixel can be read out with two different gains.

Typical Applications

- High Security Inspection
- Security
- Real-Time Sports Analysis
- Medical Imaging

Seamless Integration

The Resolv4K, 12X Zoom and Zoom 6000 lens systems seamlessly integrate with Pixelink CMOS cameras giving you high-resolution, low-noise digital imaging solutions backed by industry leading sales and technical support.

Contact your Account Representative for more information.

Software Development Kit

Providing full control of all camera functions, the Pixelink SDK is the software package of choice for developers and system integrators.

Features

- Fast and easy integration
- Free technical support
- Powerful, easy to use interface
- Full U3V compliance on all USB 3.0 cameras
- Get started with a free 30-day trial
- Microsoft Windows and Linux supported
- Supports C/C++, .NET, Visual Studio 2003 and up, Python
- Robust API allowing full control of all camera features
- Driver: USB3 Vision, GigE, 1394/IIDC (DCAM), Direct Show, TWAIN, USB 2.0
- 3rd Party Compatibility: LabVIEW, MATLAB, Halcon, Norpix, Matrox, USB3 Vision, WinRoof

QUICK REFERENCE

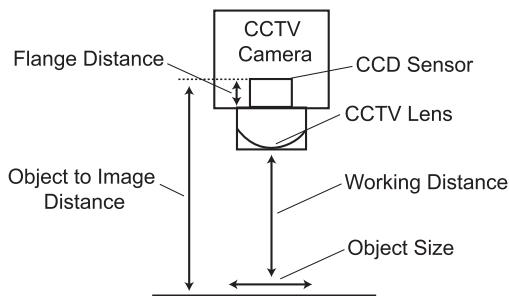

How to Determine the Focal Length Required

To choose the proper lens for an application consider the following:

- Field of View (FOV) - The size of the area to be imaged.
- Working Distance (WD) - Distance from the camera lens to the object or area under surveillance.
- CCD - The size of the camera's image sensor device.

Be consistent. If you are measuring the width of your object, use the horizontal CCD specifications, etc. If you are working in inches, do your calculations in inches and convert to millimeters at the end.

Distance Diagram

Understanding Focal Length

Video lenses are classified into three categories according to focal length: standard, wide angle and telephoto. Focal length is the distance between the camera sensor and the center of the lens. The greater the focal length, the larger the image will appear. Therefore, the greater the focal length, the more the lens becomes telephoto in application.

- **Standard Lens** - size of the object being viewed is unchanged.
- **Wide Angle Lens** - provides a wider field of view and therefore a smaller image of the object being viewed
- **Telephoto Lens** - produces a larger image of a distant object. The longer the focal length, the larger the object will appear.

$$FL = \frac{CCD \times WD}{FOV}$$

Example: You have a 1/3" C-mount CCD camera (4.8 mm horizontal). There is a 12" (305 mm) distance between the object and the front of the lens. The field of view, or object size, is 2.5" (64 mm). The conversion factor is 1" = 25.4 mm (round up).

Calculation in mm:

$$\begin{aligned} FL &= 4.8 \text{ mm} \times 305 \text{ mm} / 64 \text{ mm} \\ FL &= 1464 \text{ mm} / 64 \text{ mm} \\ FL &= 23 \text{ mm Lens Required} \end{aligned}$$

Calculation in inches:

$$\begin{aligned} FL &= 0.19" \times 12" / 2.5" \\ FL &= 2.28" / 2.5" \\ FL &= 0.912" \times 25.4 \text{ mm/inch} \\ FL &= 23 \text{ mm Lens Required} \end{aligned}$$

Understanding F/#

The f/number is an indication of the brightness of the lens. It is the measurement of the ratio between the focal length and the diameter of the entrance pupil (where the light enters the lens). It determines the amount of light reaching the camera sensor. The smaller the value, the larger the opening and the brighter the image produced by the lens.

Image Size

A lens produces images in the form of a circle, called the image circle. In a video camera, the imaging element has a rectangular sensor area (the image size) that detects the image produced within the image circle. The ratio of the length of the horizontal to vertical sides of a video image is called the aspect ratio, which is normally 4:3 (H:V) for a standard video camera.

Image Size Chart

| Image Sensor | Image Circle | Horizontal | Vertical |
|--------------|--------------|------------|----------|
| 1/3" | Ø6.0 mm | 4.8 mm | 3.6 mm |
| 1/2" | Ø8.0 mm | 6.4 mm | 4.8 mm |
| 2/3" | Ø11.0 mm | 8.8 mm | 6.6 mm |
| 1" | Ø16.0 mm | 12.8 mm | 9.6 mm |
| 4/3" | Ø22.5 mm | 17.3 mm | 13.0 mm |
| 35mm | Ø43.0 mm | 36.0 mm | 24.0 mm |

Image Sensor Size (units in mm)

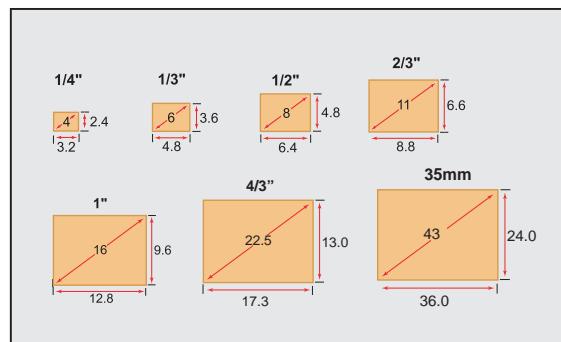

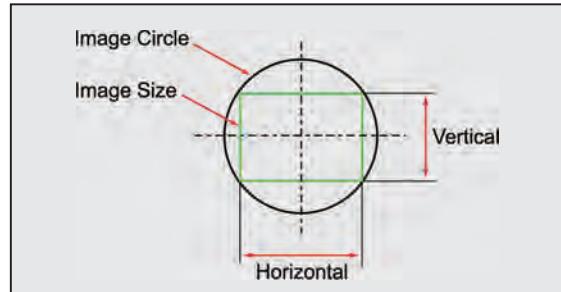

Image Size

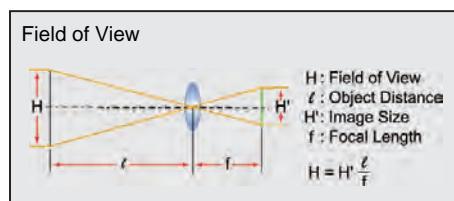

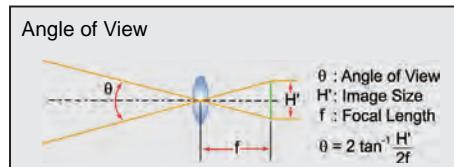

Minimum Object Distance

Minimum object distance (M.O.D.) indicates how close the lens can be placed to the object for shooting. It is measured from the vertex of the front glass of the lens.

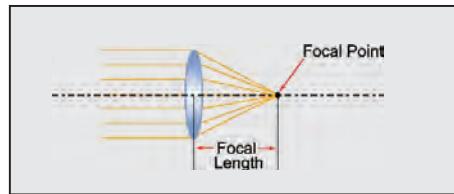

Angle of View and Field of View

The angle of view is the shooting range that can be viewed by the lens given a specified image size. Normally the angle of view is measured assuming a lens is focused at infinity. The angle of view can be calculated if the focal length and image size are known. If the distance of the object is finite, the angle is not used. Instead, the dimension of the range that can actually be shot, or the field of view, is used.

Focal Length

Distance between the principle point in the optical system and the focal point. For a single thin lens, the focal length is equal to the distance between the center of the lens and the focal point.

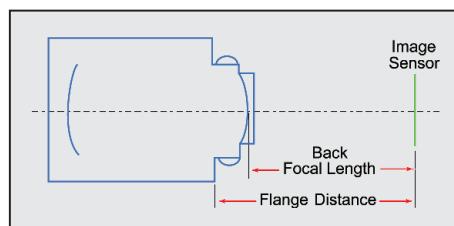

Back Focal Length

Distance between vertex of the rear element lens and image sensor.

Flange Distance

Distance between mechanical mount surface and image sensor (in air).

C-Mount=17.526 mm / .690"
CS-Mount=12.526 mm / .493"

Relationship Between Angle of View and Image Sensor Size

Cameras with different image sensor chip sizes (such as 1/3", 1/2", 2/3", 1" and 4/3"), using the same focal length lens, will each yield a different field of view.

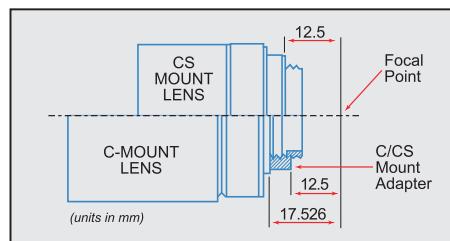

Lenses designed for a larger image sensor device will work on a new, smaller size camera. However, if a lens designed for a smaller format image sensor device (i.e. 1/3") is placed on a larger one (i.e. 2/3"), the image on the monitor will have dark corners. Image sensor sizes are in a ratio of 1:0.69:0.5:0.38:0.25. This means that a 1/2" format is 50% of a 1" format, a 1/2" format is 75% of a 2/3" format and a 1/3" format is 75% of a 1/2" format.

Camera to Monitor Magnification

| Camera Format | Monitor Size (diagonal) | | | | | |
|---------------|-------------------------|-------|-------|-------|-------|--------|
| | 9" | 14" | 15" | 18" | 20" | 27" |
| 1/3" | 38.1X | 59.2X | 63.5X | 76.2X | 84.6X | 114.1X |
| 1/2" | 28.6X | 44.5X | 47.6X | 57.2X | 63.5X | 85.7X |
| 2/3" | 20.8X | 32.3X | 34.6X | 41.6X | 46.2X | 62.3X |
| 1" | 14.3X | 22.2X | 23.8X | 28.6X | 31.8X | 42.9X |
| 4/3" | 10.6X | 16.4X | 17.6X | 21.1X | 23.5X | 31.7X |

C-Mount and CS-Mount Lens Compatibility

When using a C-mount lens for a CS-mount camera, a C/CS-mount adapter (5mm thick) is required.

General Lens Formulas

Magnification

$$m = \text{Image Size/Object Size}$$

Effective F/#

$$\text{Eff. F}/\# = \text{F}/\# (\text{m}+1)$$

Object to Image Distance

$$OI = [FL \times (1+m)^2]/m$$

Clear Aperture (Minimum)

$$\text{Aperture} = FL/(F/\#)$$

$$OI = m(FL) + (FL+VOA+BF) + FL/m$$

$$VOA = \text{Vertex to Vertex Lens Length}$$

$$\text{Depth of Focus}$$

Object to Lens Distance

$$OL = FL + FL(m)$$

$$\text{DoF} = 0.00002/\text{NA}^2 \text{ (in inches)}$$

$$\text{DoF} = 0.0005/\text{NA}^2 \text{ (in mm)}$$

Lens to Image Distance

$$LI = FL + FL/m$$

Conversion Factors

$$1 \text{ inch} = 25.4 \text{ millimeters}$$

(~ distance to the nodal points:
 $FL + FL(m)$ to the front vertex.)

$$1 \text{ meter} = 39.37 \text{ inches}$$

$$F/\# = 1/(2NA)$$

$$1 \text{ degree} = \pi/180 \text{ radians}$$

$$F/\# = FL / \text{Entrance Pupil Diameter}$$

$$1 \text{ degree} = 0.0174533 \text{ radians}$$

$$NA = 1/2 F/\#$$

$$1 \text{ micron } (\mu) = 0.001 \text{ millimeter}$$

$$NA = \sin \theta/2$$

$$1 \text{ micron } (\mu) = 1,000 \text{ nanometers}$$

$$1 \text{ micron } (\mu) = 10,000 \text{ angstroms}$$
