

Is the CRIS Right For You?

- Have you had product recalls due to packaging errors?
- Does your production require verification of 1D/2D barcodes, logo/pattern/color recognition or date/lot codes?
- Do you need multi-level user access to prevent unauthorized system modifications?
- Do you need to inspect round, touching or randomly oriented products?

CRIS CONTROL RELIABLE INSPECTION SYSTEM

Available in three different configurations - Basic, Standard and 360 - the CRIS product and package verification system features patented fail-to-safe inspection technology designed to improve your production reliability. From built-in time and date stamping to user interface logs and component failure alerts, the CRIS's fail-to-safe methodology detects system failures to prevent incorrectly packaged products from leaving the production line. With its plug and play wiring for easy deployment, the CRIS can quickly identify and remove mispackaged products and eliminate your risk of recall.

ADVANTAGES IS YOUR INSPECTION SYSTEM FAIL SAFE?

- Does your system monitor its own critical components and stop the line if any devices are disconnected?
- Does your system detect when the trigger sensor is not functioning or has been tampered with?
- Does your system detect when the inspection camera or barcode reader is not functioning or has been tampered with?
- Does your system confirm that a failed product has been physically rejected and removed from the line?
- Does your system reject uninspected parts added after the inspection point?
- Does your system differentiate between unknown products and mismatched products?
- Does your system stop the line after consecutive unknown products?
- Does your system reject products based on physical tracking (not timing)?
- Does your system record user interactions and log critical events?

**ANSWERING “NO” TO ANY OF
THESE QUESTIONS COULD
RESULT IN A PRODUCT RECALL.**

WHY CHOOSE US?

Sensors Incorporated, a Tavoron company, supports industrial sensing applications with machine vision, process control and monitoring, barcode scanning and safety technology. Our extensive product knowledge, multi-industry experience and our ability to deliver products in a fraction of the time of our competitors make us a trusted partner for industrial sensing needs.
